All injectables are administered by our Board Certified Dermatologists.

Fillers

Restylane and Juvederm are safe and natural cosmetic fillers made from Hyaluronic Acid. Hyaluronic Acid is a natural substance in the skin that helps retain moisture and softness and adds volume. These fillers provide a natural looking result by smoothing away facial wrinkles and folds, providing a subtle lip enhancement and smoothing the lines around them as well as adding lift and volume to the cheek area.

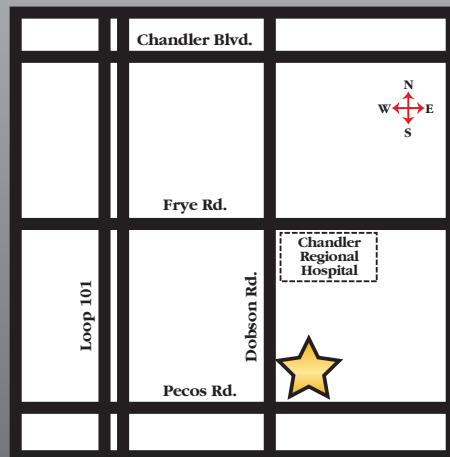

Botox

This is a simple, non-surgical procedure and the gold standard of facial anti-aging and rejuvenation. It is also the most popular single cosmetic procedure today. It is injected into the muscles and used to temporarily relax the facial expressions in the forehead, between the eyebrows and crows feet around the eyes. The results create a natural, softer and smoother appearance to the lines and it lasts several months.

Your Dermatologist and Aesthetician will work together to provide you with a balanced skin care program that is right for you.

We proudly offer the following selection of quality skin care products:

PCA Skin, Colorescience, Jane Iredale Mineral Cosmetics, Elta Md SPF, and an excellent line of sun protective hats with UPF 50.

Aesthetic Treatment Services Offered

Consultation

In your 30 minute consultation you will discuss your skin concerns with our Aesthetician. Treatment options will be recommended based on your individual skin care needs.

Color Match Consultation

Let us show you how to get that flawless finish with our mineral cosmetics. We will select the perfect color for your skin with just the right amount of coverage to give you a lightweight feel with a natural look.

PCA Skin

PCA professional chemical peels are gentle, non-toxic, light, medium and deep peels. These treatments will help stimulate, firm and tighten the skin. They address a wide range of skin types and conditions using ingredients such as alpha hydroxy acids, TCA, salicylic acid, resorcinol, retinol, tyrosinase inhibitors, antioxidants and polyphenols.

Microdermabrasion

Microdermabrasion uses diamond tip crystals with vacuum pressure to effectively exfoliate and resurface the skin and can often be used with a light chemical peel. This is an excellent treatment for skin conditions such as sun damage, fine lines and mild acne.

Dermaplane

Dermaplaning is a physical exfoliation of the skin using a fine edge tool to remove skin cells and excess facial hair. It is often used in conjunction with a light chemical peel giving a youthful glowing complexion without peeling or discomfort.

Skin Care for Melasma

Melasma is characterized by blotchy patches of darker color often appearing on the cheeks, forehead, nose, upper lip or chin. Treatments will include topical skin care and chemical peels with ingredients such as hydroquinone, kojic acid, azelaic acid, retinoids, vitamin C, arbutin or alpha hydroxy acids. These ingredients will help lighten and prevent any further hyperpigmentation. The hyperpigmentation can be triggered from over exposure to the sun or a change in hormones. Since sunlight triggers melasma, it is important to wear sunscreen every day, even on cloudy days and after sweating or swimming.

Microneedling

Using the FDA approved SkinPen, automated microneedling is an innovation in aesthetics and effective treatment to naturally restore younger looking skin. Microneedling is a safe, chemical free and minimally invasive technique for stimulating collagen, to reduce the appearance of fine lines, soften wrinkles and acne scars.

Laser Genesis

Laser Genesis is a non-invasive skin rejuvenation treatment to treat fine line wrinkles, large pores, uneven skin texture, diffuse redness and scars. You will experience a gentle warming of the skin's surface, often described as therapeutic and relaxing. Laser Genesis stimulates collagen regrowth by gently heating the upper layers of the dermis. On average 6 to 10 treatments are recommended, 2 weeks apart.

Limelight Photofacial

Finally, a treatment that quickly and effectively removes brown spots and improves redness and rosacea. The intense pulsed light (IPL) is absorbed by the pigmented spots and not the surrounding skin. Treated spots lighten or disappear within a couple of weeks. 3-5 treatments are recommended, 4-6 weeks apart.

Laser Hair Removal

Laser hair removal is safe and effective for all skin types. Men and women alike can enjoy the reduction of unwanted facial or body hair. The hair must be dark for the treatments to work. Most areas require a minimum of 6 to 10 treatments, 6 weeks apart.

Laser Vein Removal

Laser Vein Removal is an excellent option to reduce those unsightly red and blue veins on the face and/or body. This treatment is also excellent for elimination cherry angiomas and hemangiomas.
